

*Am willing to tear down walls, build bridges, and light fires.
I have no real experience, but lots of energy, a bit of that “vision thing”,
and I’m not afraid to start from the beginning.*

Master thesis

- title *On the rheology of entangled polymers*
- supervisors Pr Christian Bailly and Pr Roland Keunings
- description Study of the complex behaviour of viscoelastic fluids, and in particular of entangled polymers. The study is focussed on double-step strain and recoil deformations, comparing experimental data to simulations based on recent microstructural models. Depending on the model used, numerous mathematical tools are used: numerical solving of nonlinear PDEs, stochastic equations, Monte-Carlo simulations, Fourier transforms, ...
